Quarterly Bulletin, No. 131, January 1, 1976

quarterly bulletin

DEPARTMENT OF REGIONAL PLANNING · COUNTY OF LOS ANGELES, CALIFORNIA

POPULATION IN SLIGHT INCREASE GENERAL TREND UNCHANGED

The number of Los Angeles County residents remained relatively unchanged during the second half of 1975. The Department estimates that on January 1, 1976 the County had a total population of 6,994,700. This represents a July through December gain of approximately 2,400 as compared with a loss of 28,500 in the first half. However, no particular significance should be given to these 1975 countywide gains and losses. Rather, the Department continues to believe that they represent minor fluctuations along what is essen-

(Continued on page 6)

SINGLE UNITS CLIMB SHARPLY—MULTIPLE UNITS HOLD FIRM IN SECOND HALF

Net additions to single units climbed sharply and multiple units held firm in the second half of 1975. The 9,706 total units added in these six months fell slightly short of the 9,727 units recorded in the same period of 1974.

Single unit additions in the last six months totaled 2,924 or 1,733 units more than in the first half. This was the greatest number of single units added in any second half since 1968.

Multiple units added in last year's second half to-

LOS ANGELES COUNTY HOUSING TRENDS* NET CHANGES COMPARED JULY THROUGH DECEMBER

	Housing Units		Change From Year Ago	
	1975	1974	Number	Percent
Single Units**	2,924	1,951	973	49.9
Multiple Units	6,782	7,776	—994	—12.8
Total Units	9,706	9,727	—21	—0.2

*These figures are compiled from a survey of residential new construction, move-ins, removals, demolitions and alterations reported by each of the permit issuing agencies in Los Angeles County. Housing unit changes are entered in the housing inventory either upon completion or after an assumed completion date.

**Includes single units, duplex units and mobile homes.

HOUSING *(Continued from page 1)*

taled 6,782. This was a slight gain of 123 units over the number added in the previous six months, but 994 units or 12.8 percent below those added in the same period of the previous year.

Single units accounted for 30 percent of the net units added in the second half as compared with 15 percent in the first six months. While this resurgence of single family home construction may foreshadow the beginning of a trend, the major finding which emerges from a review of the 1975 housing records is that 77 percent of the net units added were in multiple structures. The overwhelming character and longevity of this dominance is clearly shown in the bar graph on page 1. The April 1976 issue will contain a more complete review of the housing changes in 1975.

POPULATION *(Continued from page 1)*

tially a horizontal trend line centered upon a total population of 7,000,000.

Generally, population changes within the County continued to follow the long established pattern of gains in the outlying suburban areas and losses or little change in the central urban districts. For example, twelve of the thirteen Major Statistical Areas and twenty-two of the thirty cities which registered population increases in 1975 are located in the suburbs. Population changes in the unincorporated areas also reflected this pattern, increasing approximately 10,300 to a January 1, 1976 total of 1,021,500. At the same time, those living in cities declined approximately 36,300 to a total of 5,973,200.

A review of the 1975 population changes within a fifteen mile radius of downtown Los Angeles shows that this central urban area lost approximately 38,000 inhabitants. However, not all cities and unincorporated places within this radius experienced losses. In fact, in the southeastern quadrant of this radius, a counter trend may be emerging.

A notable example is the Compton Area (MSA 8.0), an area which has been in continuous decline since the 1970 Census, losing an estimated 17,800 residents in this period. However, in 1975, the decline was halted and the Compton Area experienced a small net gain.

Some other older urban areas have also experienced a steady decline in housing vacancies which suggests that similar turnarounds have or are about to occur. However, there is not yet sufficient corroborative evidence to determine whether these declining vacancies foreshadow a reversal of past trends or merely reflect short-term local conditions.

CENSUS TRACTS UNDER REVIEW PART OF 1980 CENSUS PREPARATIONS

A review of Los Angeles County census tracts has begun in preparation for their use in the 1980 Census. No major changes are contemplated in the overall tract design. However, some of the existing 1,576 census tracts now have populations in excess of 8,000 and physical changes have occurred which require a re-examination of the boundaries of several others.

A preliminary survey indicates that, in updating the Los Angeles County Census Tract Plan for the 1980 Census, thirty to forty census tracts may be divided and perhaps as many minor boundary adjustments made. Although some changes will be necessary, every effort will be made to preserve the integrity of the existing boundaries so that comparability of the 1980 census tract data with that of earlier censuses will not be impaired.

The original numbering plan of one to three digits with an alphabetical suffix was replaced in 1960 by a four digit system, which in turn was expanded to six digits in 1970. No basic change in the existing numbering system for the 1980 Census is anticipated.

POPULATION AND HOUSING TABLE NOTES

Housing unit adjustments contained in this issue include the following:

Statistical Area No.	Jurisdiction	Housing Units Single	Mobile Homes	Multiple	*
14.1	Glendale	5			(2)
		—96			(1)
18.1	Arcadia	12			(2)
18.42		—12			(3)
20.2	Palmdale	1	39	4	(2)
20.121	Unincorporated	—1	—39	—4	(3)
24.21	Unincorporated	—5			(3)
25.2	Claremont	11			(2)
25.42	Unincorporated	—11			(3)

*Reason adjusted: (1) Demolitions in redevelopment area; (2) Annexation; (3) Annexed to adjacent city.

Adjustments were made in the population estimates of the following cities in order to recognize the results of recent special censuses: Pasadena (SA 24.1), Claremont (SA 25.2) Carson (SA's 8.4, 10.213, 10.31 and 10.32), and Pico Rivera (SA 34.4). The housing counts for these cities will be adjusted in the July 1976 issue.

EDITOR'S NOTE

During the past seventeen years, Laura Mowrey has worked in or been in charge of the unit responsible for updating the housing inventory. In this capacity, she has initiated or supervised the implementation of many changes which have improved the quality and widened the scope of this file.

The housing estimates in this and the April issues are the last to be compiled under her supervision. Now retired, she has left us a valuable legacy in the procedures, techniques, and qualitative standards she established.

Two other changes also should be noted. Both Richard Kawasaki, Assistant Section Head, and Pamela Holt have been transferred to other departmental functions. while Bill Dunlap, Patricia Emmons and Marcelle Mehlinger have joined Faye Howard on the staff.

Quarterly Bulletin No. 132, April 1, 1976

quarterly bulletin

DEPARTMENT OF REGIONAL PLANNING · COUNTY OF LOS ANGELES, CALIFORNIA

NET HOUSING ADDITIONS DECLINE FOR THIRD YEAR

Net additions to the housing inventory in 1975 totaled 17,556 which was 7,173 fewer units than were added in 1974. This represents a decline of 29 percent from the previous year and marks the third consecutive year in which net annual additions fell below those reported for the previous year.

The depressed state of multiple unit construction was the major contributor to this general decline. First evident in the second half of 1974, this depression in apartment construction continued throughout 1975. Even the potential mitigating influence of a second-half rally in new single units proved to be too small to counterbalance this decline.

Net housing increases were recorded last year in all but five Major Statistical Areas. The Puente Hills Area, moving up from third place in 1974, led all others with 1,716 units added. The Glendale Area which had placed sixth in 1974 took over second place with 1,476 units. Last year's second place Santa Monica-Venice Area slipped to third with 1,405 units. Other MSA's showing substantial net housing increases included the following: Encino-Central Valley Area 1,329, Long Beach Area 1,271, North County Area 1,185 and Hollywood Area 900 units.

The five MSA's which lost housing and their respective unit losses were as follows: Southeast Area —225, Central Area —197, Compton Area —184, Northeast Area —58 and El Monte Area —9.

Although in a depressed state, multiple units again dominated residential construction in Los Angeles County last year, as they have each year since 1958. The records show that 77 percent of all units entering the housing inventory in 1975 were in apartment structures. However, it should be noted that in the preceding year, they constituted 84 percent of total net additions.

The extent to which multiple unit construction sagged during 1975 is underscored when last year's activity is compared with that of 1974. The twelve months ending on December 31, 1975 witnessed the net addition of 13,441 multiple units to the County's housing supply as compared with 20,836 such units in 1974. Thus, during these months, 7,395 fewer multiple units were added than in the preceding year. This represents a decline of 35 percent and is the smallest number of multiple units added in any year since 1968.

Multiple unit construction was widely distributed accounting for a majority of the housing added in twenty-two MSA's. However, five Major Statistical Areas in particular experienced substantial increases. These and their multiple unit gains included the following: Santa-Monica-Venice Area 1,436, Glendale Area 1,348, Long Beach Area 1,280, Encino-Central 1,142 and Hollywood Area 943.

LOS ANGELES COUNTY HOUSING UNIT TYPES APRIL 1, 1940 TO JANUARY 1, 1976

Year	*Single Units**	*Mulitple Units*	*Total Units*
January 1, 1976	1,720,621	996,145	2,716,766
Percent	63.3	36.7	100.0
April 1, 1970 (Census)	1,692,427	849,176	2,541,603
Percent	66.6	33.4	100.0
April 1, 1960	1,596,591	513,017	2,109,608
Percent	75.7	24.3	100.0
April 1, 1950	1,108,577	334,114	1,442,091
Percent	76.8	23.2	100.0
April 1, 1940	708,000	253,531	961,531
Percent	73.6	26.4	100.0

*Includes single units, duplex units and mobile homes.

Sources: U.S. Bureau of the Census, 1940 through 1970 Censuses of Housing (as revised). Department of Regional Planning, 1976 estimate.

Last year's small counter trend in single unit additions produced a net annual increase of 4,115 units. This was 5.7 percent or 222 more units than were added in 1974.

During 1975, single units were the dominant element in the residential construction activity in eight Major Statistical Areas while in four other areas they comprised a substantial percentage, but not a majority of the net units added. Not unexpectedly, all twelve of these areas are located in outlying sectors of the County.

The Puente Hills Area experienced the greatest net increase in single units of any of the 35 Major Statistical Areas. This area, located in the southeastern corner of the San Gabriel Valley, had a net total gain of 1,368 single units. This increase was larger than the combined gains of the North County and Chatsworth-West Valley Areas, whose single unit increases totaled 849 and 442, respectively.

Other MSA's in which singles comprised a majority of the net units added were: Norwalk Area 417, Calabasas Area 321, Pomona Area 286, San Vicente-Palisades Area 111 and Malibu Area 105.

MSA's also showing substantial single unit gains included the following: Palos Verdes Area 316, Citrus Area 264, San Fernando Area 235 and Whittier Area 221.

The 1975 decline in net housing unit additions would have been even greater had there not been a concurrent reduction in housing unit demolitions. An important element in this decrease has been the continuing

(Continued on page 6)

curtailment in the demolition of housing units for freeway construction. During the past three years, demolitions ordered by California Department of Transportation have constituted less than 5 percent of all units demolished as compared with 17 percent in 1972 and 23 percent in 1971.

A recently completed survey of residential demolitions by the Department of Regional Planning disclosed that in the years 1970 through 1975, a total of 45,344 housing units were demolished.* This means that for each five new housing units authorized in the past six years, one older unit has been demolished. In annual terms, the demolition ratio this decade has ranged from one unit demolished to each six units authorized in both 1970 and 1972 to one in three in 1974. During the Sixties, the overall rate for the decade was one in six while the individual annual rates ranged from a low of one in eleven in 1960 to a high of one in two in 1966.

*Copies of the report *Dwelling Unit Demolitions in Los Angeles County 1960-1975* are available upon request.

Percent	1.4	22.5	17.5	7.1

* These figures are compiled from a monthly survey of residential construction including new units, move-ins, removals, demolitions and alterations reported by the permit issuing agencies in Los Angeles County. These reported housing unit changes are entered in the housing inventory either upon completion or after an assumed completion date.

** Includes both single and duplex units.

*** These totals include adjustments not reported in the regular building permit procedures.

(R) 1970 Census figures as revised by the Bureau of the Census after release of the official counts.

NET HOUSING UNIT ADDITIONS DROP TO LOWEST POINT IN NINE YEARS

Net additions to Los Angeles County's housing inventory from January 1 through June 30, 1976 totaled 6,061 units. These additions bring the County's housing supply to an estimated mid-year total of 2,721,716 units. This is the smallest net increase in any first half since 1967.

A sharp drop in new multiple units was the principal factor accounting for this decline. Net multiple units added fell to 2,891 during the first half as compared with 6,782 in the previous six months and 6,659 in the first half of 1975. This is the smallest number of multiple units added in any half-year period in more than two decades, and the first time since the first half of 1960 that multiple units have not comprised a majority of all units added.

Running counter to this decline in apartment construction, 3,170 single family homes were added in the first half. This is 246 more than were added in the previous

(Continued on page 6)

LOS ANGELES COUNTY POPULATION SHOWS MODERATE GAIN

Los Angeles County population during the first half of 1976 rose moderately to a mid-year total of 7,018,600. This July 1st estimate represents an increase of 23,900 since the beginning of the year. This current gain far exceeds the increase of 2,400 in the preceding six months and the 28,500 loss shown in the first half of 1975.

Both the total number living within cities and the unincorporated area rose during the first half. The total population in cities increased approximately 21,800 to a July first estimate of 5,995,000. In the same period, the unincorporated area population moved up to 1,024,000, an increase of 2,100.

This latest Los Angeles County estimate falls within a narrow one percent range centered upon a population of 7,000.000. This has been the common characteristic of all of county-wide gains and losses since January 1974. Whether or not this most recent upturn signals the revival of sustained population growth is as yet uncertain.

BIRTHS INCREASE, DEATHS DECLINE IN 1976

The number of births in Los Angeles County during 1976 increased 1.9%, while deaths declined 3.0% according to provisional counts recently released by the Los Angeles County Department of Health Services. These preliminary 1976 counts show that there were 113,078 births and 57,276 deaths during the year. Represented in these latest figures are 2,118 more births and 1,768 fewer deaths than were reported in 1975. Unless there are unexpected major changes in the final figures, it appears now that county's birth rate for 1976 will be 16.1 per thousand population with the death rate set at 8.2 per thousand.

This marks the third consecutive year of a continuing rise in both the number of births and the birth rate and a concurrent decline in both total deaths and the death rate.

Provisional 1976 California figures disclosed that there were 332,239 births and 171,456 deaths in the state while nationwide births totaled 3,165,000 and deaths 1,912,000. A comparison of these counts with those of the previous year shows that in California, births increased 14,914 and deaths 651. Nationally, the 21.000 increase in the number of births was almost equalled by a 19,000 increase in deaths.

A comparison of the 1976 birth and death rates of the

* Per 1,000 population at mid year except for 1950, 1960 and 1970 years. Census counts used for these years.

POPULATION AND HOUSING NOTES

Adjustments have been made in the housing unit estimates of the following cities and Statistical Areas in order to recognize the results of recent special censuses: Carson (SA's 8.4, 10.31, 10.32, 10.5), Pasadena (SA 24.1), Claremont (SA 25.2), Walnut (SA 26.5), Montebello (SA 32.4) and Commerce (SA 32.9). In addition, 355 units were deleted from SA 10.212 after a field survey uncovered a 1970 Census overcount.

The mobile home counts of the following cities and Statistical Areas were changed to reflect the results of a recent California Department of Finance survey: Burbank (SA 4.1), Glendora (SA 7.4), Gardena (SA 16.1), Inglewood (SA 16.2), Downey (SA 22.3), Paramount (SA 22.4), Bellflower (SA 22.7) and Bell Gardens (SA 32.11).

BIRTHS AND DEATHS

(Continued from page 1)

county, state and nation reveals that the Los Angeles County birth rate of 16.1 per thousand is substantially greater than both the state rate of 15.4 and the national rate of 14.7. Although Los Angeles County's death rate of 8.2 per thousand fell well below the national rate of 8.9, it did exceed the state rate which was reported at 8.0 deaths per thousand.

The birth rate in the county during the early years of this decade generally paralleled the declining national trend. The decade began with a rate of 18.8 births per thousand. The following year it declined to 16.5, and continued falling until in 1973 a post World War II record low of 14.8 per thousand was reported. Turning about in 1974, the rate rose to 15.5, edged up to 15.9 in 1975 and to 16.1 per thousand in 1976.

Unlike the county's experience, the national birth rate has continued to decline throughout the decade. The first year of the Seventies ended with the national rate at 18.4 births per thousand. The following year it dropped to 17.2. Continuing to decline, the rate fell to 15.6 in 1972, held at 14.9 in 1973 and 1974, but in 1975 dropped to 14.8 per thousand. This 1975 rate was the lowest annual birth rate ever experienced in the United States. Provisional 1976 figures indicate that rate may have fallen even lower.

The death rate in Los Angeles County in the period 1958 through 1973 fluctuated between 8.8 and 9.0 deaths per thousand with minor variations in 1959 and 1967 when the rate dropped to 8.7 per thousand. However, in 1974, for the first time it fell to 8.6 per thousand. Continuing to decline it slipped to 8.4 in 1975 and to 8.2 per thousand in 1976. If this provisional 1976 rate is borne out by the final counts, this 1976 death rate will be the lowest ever recorded in this county.

Although traditionally higher, the United States death rate recently has been showing comparable declines. In 1974, the national rate was reported as 9.2 per thousand down from previous years' 9.4. During 1975, the rate fell to 8.9 per thousand. This was the lowest death rate in the nation's history. Provisional counts for 1976 show the rate holding at this level.

HOUSING

(Continued from page 1)

six months and 1,979 more than in the comparable period of 1975.

The greatest housing gains during the first six months were recorded in three outlying Major Statistical Areas: North County, Puente Hills and Chatsworth-West Valley. In each of these, singles comprised a substantial majority of the new units added. For example, in the North County Area singles accounted for 511 of 617 total units added, Puente Hills Area 495 of 602 and Chatsworth-West Valley Area 347 of 511.

Strong single unit increases also were recorded in four other Major Statistical Areas. These and their gains were as follows: Pomona Area 269, San Fernando Area 253, Palos Verdes Area 221 and Encino-Central Valley Area 216.

Although in general decline, relatively large multiple unit increases were noted in four of the thirty-five Major Statistical Areas. The Beverly Hills Area led these four with a gain of 350 units followed by the Santa Monica-Venice Area with 297, East Area 289 and Inglewood Area 220.

	Housing Unit Types: Single**	Mobile Homes	Multiples	Total
July 1, 1976	1,682,054	41,714	997,948	2,721,716
April 1, 1970 (R)	1,658,376	34,051	849,176	2,541,603
April 1970-July 1976 Change***				
Number of Units	23,678	7,663	148,772	180,113
Percent	1.4	22.5	17.5	7.1

* These figures are compiled from a monthly survey of residential construction including new units, move-ins, removals, demolitions and alterations reported by the permit issuing agencies in Los Angeles County. These reported housing unit changes are entered in the housing inventory either upon completion or after an assumed completion date.

** Includes both single and duplex units.

*** These totals include adjustments not reported in the regular building permit procedures.

(R) 1970 Census figures as revised by the Bureau of the Census after release of the official counts.

NET HOUSING UNIT ADDITIONS DROP TO LOWEST POINT IN NINE YEARS

Net additions to Los Angeles County's housing inventory from January 1 through June 30, 1976 totaled 6,061 units. These additions bring the County's housing supply to an estimated mid-year total of 2,721,716 units. This is the smallest net increase in any first half since 1967.

A sharp drop in new multiple units was the principal factor accounting for this decline. Net multiple units added fell to 2,891 during the first half as compared with 6,782 in the previous six months and 6,659 in the first half of 1975. This is the smallest number of multiple units added in any half-year period in more than two decades, and the first time since the first half of 1960 that multiple units have not comprised a majority of all units added.

Running counter to this decline in apartment construction, 3,170 single family homes were added in the first half. This is 246 more than were added in the previous

LOS ANGELES COUNTY POPULATION SHOWS MODERATE GAIN

Los Angeles County population during the first half of 1976 rose moderately to a mid-year total of 7,018,600. This July 1st estimate represents an increase of 23,900 since the beginning of the year. This current gain far exceeds the increase of 2,400 in the preceding six months and the 28,500 loss shown in the first half of 1975.

Both the total number living within cities and the unincorporated area rose during the first half. The total population in cities increased approximately 21,800 to a July first estimate of 5,995,000. In the same period, the unincorporated area population moved up to 1,024,000, an increase of 2,100.

This latest Los Angeles County estimate falls within a narrow one percent range centered upon a population of 7,000.000. This has been the common characteristic of all of county-wide gains and losses since January 1974. Whether or not this most recent upturn signals the revival of sustained population growth is as yet uncertain.

BIRTHS INCREASE, DEATHS DECLINE IN 1976

The number of births in Los Angeles County during 1976 increased 1.9%, while deaths declined 3.0% according to provisional counts recently released by the Los Angeles County Department of Health Services. These preliminary 1976 counts show that there were 113,078 births and 57,276 deaths during the year. Represented in these latest figures are 2,118 more births and 1,768 fewer deaths than were reported in 1975. Unless there are unexpected major changes in the final figures, it appears now that county's birth rate for 1976 will be 16.1 per thousand population with the death rate set at 8.2 per thousand.

This marks the third consecutive year of a continuing rise in both the number of births and the birth rate and a concurrent decline in both total deaths and the death rate.

Provisional 1976 California figures disclosed that there were 332,239 births and 171,456 deaths in the state while nationwide births totaled 3,165,000 and deaths 1,912,000. A comparison of these counts with those of the previous year shows that in California, births increased 14,914 and deaths 651. Nationally, the 21.000 increase in the number of births was almost equalled by a 19,000 increase in deaths.

A comparison of the 1976 birth and death rates of the

(P) Provisional

* Per 1,000 population at mid year except for 1950, 1960 and 1970 years. Census counts used for these years.

POPULATION AND HOUSING NOTES

Adjustments have been made in the housing unit estimates of the following cities and Statistical Areas in order to recognize the results of recent special censuses: Carson (SA's 8.4, 10.31, 10.32, 10.5), Pasadena (SA 24.1), Claremont (SA 25.2), Walnut (SA 26.5), Montebello (SA 32.4) and Commerce (SA 32.9). In addition, 355 units were deleted from SA 10.212 after a field survey uncovered a 1970 Census overcount.

The mobile home counts of the following cities and Statistical Areas were changed to reflect the results of a recent California Department of Finance survey: Burbank (SA 4.1), Glendora (SA 7.4), Gardena (SA 16.1), Inglewood (SA 16.2), Downey (SA 22.3), Paramount (SA 22.4), Bellflower (SA 22.7) and Bell Gardens (SA 32.11).

BIRTHS AND DEATHS

(Continued from page 1)

county, state and nation reveals that the Los Angeles County birth rate of 16.1 per thousand is substantially greater than both the state rate of 15.4 and the national rate of 14.7. Although Los Angeles County's death rate of 8.2 per thousand fell well below the national rate of 8.9, it did exceed the state rate which was reported at 8.0 deaths per thousand.

The birth rate in the county during the early years of this decade generally paralleled the declining national trend. The decade began with a rate of 18.8 births per thousand. The following year it declined to 16.5, and continued falling until in 1973 a post World War II record low of 14.8 per thousand was reported. Turning about in 1974, the rate rose to 15.5, edged up to 15.9 in 1975 and to 16.1 per thousand in 1976.

Unlike the county's experience, the national birth rate has continued to decline throughout the decade. The first year of the Seventies ended with the national rate at 18.4 births per thousand. The following year it dropped to 17.2. Continuing to decline, the rate fell to 15.6 in 1972, held at 14.9 in 1973 and 1974, but in 1975 dropped to 14.8 per thousand. This 1975 rate was the lowest annual birth rate ever experienced in the United States. Provisional 1976 figures indicate that rate may have fallen even lower.

The death rate in Los Angeles County in the period 1958 through 1973 fluctuated between 8.8 and 9.0 deaths per thousand with minor variations in 1959 and 1967 when the rate dropped to 8.7 per thousand. However, in 1974, for the first time it fell to 8.6 per thousand. Continuing to decline it slipped to 8.4 in 1975 and to 8.2 per thousand in 1976. If this provisional 1976 rate is borne out by the final counts, this 1976 death rate will be the lowest ever recorded in this county.

Although traditionally higher, the United States death rate recently has been showing comparable declines. In 1974, the national rate was reported as 9.2 per thousand down from previous years' 9.4. During 1975, the rate fell to 8.9 per thousand. This was the lowest death rate in the nation's history. Provisional counts for 1976 show the rate holding at this level.

HOUSING

(Continued from page 1)

six months and 1,979 more than in the comparable period of 1975.

The greatest housing gains during the first six months were recorded in three outlying Major Statistical Areas: North County, Puente Hills and Chatsworth-West Valley. In each of these, singles comprised a substantial majority of the new units added. For example, in the North County Area singles accounted for 511 of 617 total units added, Puente Hills Area 495 of 602 and Chatsworth-West Valley Area 347 of 511.

Strong single unit increases also were recorded in four other Major Statistical Areas. These and their gains were as follows: Pomona Area 269, San Fernando Area 253, Palos Verdes Area 221 and Encino-Central Valley Area 216.

Although in general decline, relatively large multiple unit increases were noted in four of the thirty-five Major Statistical Areas. The Beverly Hills Area led these four with a gain of 350 units followed by the Santa Monica-Venice Area with 297, East Area 289 and Inglewood Area 220.

PLACE NAME INDEX

LOS ANGELES COUNTY STATISTICAL AREAS

This issue contains two of a series of reference aids which have been developed to help our readers quickly retrieve needed information from current or past Quarterly Bulletins.

The place name index, below, replaces an earlier edition published in April 1970 as part of Quarterly Bulletin Supplement No. 108. It has been revised to reflect annexations, incorporations and other subsequent boundary changes, including the 47 new Statistical Areas created in January 1972.

The accompanying loose leaf index to statistical tables is new. It has been designed as a companion to the subject index issued with Quarterly Bulletin No. 130 (October 1975). Copies of this earlier subject index are available upon request.

DEPARTMENT OF REGIONAL PLANNING · COUNTY OF LOS ANGELES, CALIFORNIA

PLACE NAME INDEX

LOS ANGELES COUNTY STATISTICAL AREAS

This issue contains two of a series of reference aids which have been developed to help our readers quickly retrieve needed information from current or past Quarterly Bulletins.

The place name index, below, replaces an earlier edition published in April 1970 as part of Quarterly Bulletin Supplement No. 108. It has been revised to reflect annexations, incorporations and other subsequent boundary changes, including the 47 new Statistical Areas created in January 1972.

The accompanying loose leaf index to statistical tables is new. It has been designed as a companion to the subject index issued with Quarterly Bulletin No. 130 (October 1975). Copies of this earlier subject index are available upon request.

CITIES

NAME	STATISTICAL AREA
